## EDITORIAL BOARD:

### CHIEF EDITOR:

**Dr. Azizah Ab Manan, MBBS, MPH**

Public Health Physician & State Epidemiologist (NCDC), Penang State Health Department

### EDITORS:

**Dr. Nor Saleha Ibrahim Tamin, MD, MPH**

Public Health Physician & Senior Principal Assistant Director (Head of Cancer Unit)  
Non-Communicable Disease Sector, Ministry Of Health

**Dr. Noor Hashimah Abdullah, MD, MPH**

Public Health Physician & State Epidemiologist (NCDC), Kelantan State Health Department

**Dr. Asmah Zainal Abidin, MD, MPH**

Public Health Physician & State Epidemiologist (NCDC), Perak State Health Department

**Mastulu Wahab**

Medical Record Assistant, Sarawak State Health Department

### SUPPORTING EDITORS:

**Dr. Misliza Ahmad, MBBS, MPH**

Public Health Physician & State Epidemiologist (NCDC)  
Wilayah Persekutuan Kuala Lumpur & Putrajaya State Health Department

**Dr. Renuga K. Raman**

Medical Officer & Coordinator of Cancer Registry Unit, National Cancer Institute, Putrajaya

**Dr. Nabihah Ali**

Medical Officer, Cancer Registry Unit, National Cancer Institute, Putrajaya

**Dr. Puteri Nureyia Amir**

Medical Officer, Cancer Registry Unit, National Cancer Institute, Putrajaya

**Wan Roslida Othman**

Statistician, Health Informatic Centre, Ministry Of Health, Putrajaya

### SUPPORTING STAFF:

**Dr. Ruzawati Zahri**

Medical Officer (NCDC), Pahang State Health Department

**Salina Asha'ari**

Staff Nurse, Cancer Registry Unit, National Cancer Institute, Putrajaya

**Nik Zanariah Nik Man**

Administrator Assistant, Kelantan State Health Department

**Muhammad Izzat Mat Isa**

Assistant Medical Officer, Kuala Lumpur & Putrajaya State Health Department

**Mohd Hafiz Ishak**

Assistant Environmental Health Officer, Selangor State Health Department

## PREFACE

This is the first 5-year report of the Malaysian National Cancer Registry (MNCR) since it was established in all states in 2007 under the Public Health Division, Ministry of Health. The report is based on new cancers diagnosed for the period of 1st January 2007 through to 31st December 2011 and registered by state registries. The data reported in this report were as they stood on 1st June 2015.

The cancer registry database is dynamic, and the data are continually updated in the light of the most recent available information. Accordingly, the numbers in this report for the earlier years may vary slightly from those in previous publications.

The value of cancer registries will be enhanced when they are linked with other well established international databases as these will help to profile the different types of cancers and how such cancers are linked with the specific environmental, socio-cultural, ethnic and other related characteristic inherent in a specific population or defined geographical area. In this report we made the international comparisons with Singapore (Singapore Cancer Registry, Interim Report: Trends in Cancer Incidence in Singapore 2009 – 2013) and with other countries (Cancer Incidence in Five Continents Volume X, 2014).

The registry collects and disseminates reliable population-based cancer data to assist in the planning of services and in the prevention and treatment of cancer. In addition, timely, accurate, reliable and validated information on cancers occurring in the country is crucial in the planning of effective preventive and management strategies for cancer. There will also be research opportunities for those who are keen to study more about the aetiology of common cancers in our population or to look for more innovative ways of diagnosing or treat patients with specific cancers.

Much time and effort has been put into accuracy, completeness and data quality, in the process of collecting the data and in preparing this report. We sincerely hope that the data in this report would be used as a reference material.

We wish to record our thanks to all participating hospitals, clinics, institutions, and laboratories for their corporation and regular notifications to the respective state cancer registries. We also wish to extend our appreciation to Health Informatics Centre (HIC), Ministry of Health for their assistance in active searching of cancer data. Lastly, our deep appreciation to National Cancer Institute staff especially Dr Gerard Lim Chin Chye and Cancer Registry Unit for giving us the full support during the preparation of this report.

## FOREWORD

In 2002, the National Cancer Registry (NCR) was operating under the Clinical Research Centre (CRC). In 2007, the NCR and the Regional Cancer Registries were merged and managed by the Non-Communicable Disease Sector, Disease Control Division of the Ministry of Health.

This will be the first Report of the National Cancer Registry that is published after the National Cancer Institute took over as the secretariat on 1st January 2015. The National Cancer Registry will be reporting on Cancer Incidence of Malaysia. Much work has already been carried out by the Disease Control Division of the Ministry of Health, together with the State Epidemiology officers and staff of the State Health Departments.

Staff from both central and state agencies have worked hard, in ensuring the validity of the data which has been gathered. Appreciation is mentioned particularly to Dr. Azizah Abd Manan, Dr. Nor Saleha, Dr. Noor Hashimah, and Dr. Asmah Zainal Abidin and other state epidemiology officers and staff, staff of Cancer Registry Unit of National Cancer Institute (NCI), Health Informatic Centre (PIK) and all who have been contributing in one way or another towards the production of this report. Special mention is made to Dr. Noor Hashimah for allowing the use of her template in the analysis of the data.

Much time and effort has been put into the process of collecting data and ensuring its accuracy, completeness and quality by the National Cancer Registry. It is hoped that this report can provide an insight on cancer incidence in Malaysia which can be used by the health authorities, service providers and researchers. Cancer Registries are crucial in any Cancer Control Programme as the data in the Cancer Registries are needed in developing strategies in primary, secondary and tertiary prevention, as well as health care planning and planning for patient care and research.

The following actions can be taken to improve the future reports: establishing closer rapport with all the Source Data Providers (SDP's), providing feedback regularly to respective SDP's including their performance, regular road shows and strengthening human resource. To strengthen and sustain population based cancer registries according to international standards requires meticulous planning, cooperation of medical institutions, dedicated and committed personnel, and adequate resources.

We look forward to further developments of the National Cancer Registry.

Thank you.

**DR. GERARD LIM CHIN CHYE**

Head of Department, Department of Radiotherapy and Oncology  
National Cancer Institute, Putrajaya

## FOREWORD

This 5-year Malaysian National Cancer Registry (MNCR) report, which covers the years 2007 to 2011, is another milestone in the development of healthcare services in this country, whereby it will enable us to appreciate the overall cancer incidence and burden in Malaysia.

The report from this registry will facilitate the planning and institutionalisation of appropriate measures and the distribution of cancer care. The overall benefits derived from this result will be reflected in our ability to provide effective healthcare services which is in line with the 11th Malaysia Plan (RMK-11). Cancer trends represent a subtle interplay between incidence, mortality and survival. These patterns are altering due to many interacting causes such as early detection, screening programmes, changing exposure to risk factors and advances in cancer care.

The Government will intensify its efforts to increase quality of health care by targeting the areas that have lack of access to health services by uplifting the capacity of healthcare facilities, and trained health personnel.

Regional Cancer Registries such as Penang, Johor, Kelantan, Pahang, Melaka, Sabah and Sarawak have each published a 5-year report. The Penang Cancer Registry has published its third 5-year report since it was established in 1994; its report has also been included in the Cancer Incidence in Five Continents Volume IX, 2007 and Volume X, 2014.

We thank all the physicians, epidemiologists, pathologists, statisticians and data managers in hospitals, State Cancer Registries and Ministry of Health who have effortlessly collaborated and cooperated in supporting the Malaysia Cancer Registry. Our special thanks for this publication go to all our data managers who have worked so meticulously to compile the present information. We are also grateful to all of our close collaborators and look forward to continue this effort.

I would also like to acknowledge and place on record the excellent teamwork by members of the Cancer Unit of Disease Control Division, Health Informatics Centre (Pusat Informatik Kesihatan), the State Epidemiology Officers (NCDC) and staff, and Cancer Registry Unit of National Cancer Institute who have been involved in producing, gathering and processing the data for the Malaysia Cancer Registry. The close rapport between the source data providers, experts and staff of the NCR is one of the main reasons for the success of the NCR. We look forward to continuation of these efforts in providing reliable national data on cancer.

Thank you.

  
**DATUK DR. NOOR HISHAM ABDULLAH**  
Director General of Health, MALAYSIA

## MESSAGE

Cancer constitutes an enormous burden on societies globally. The occurrence of cancer is increasing because of growth and aging of the population, as well as an increasing prevalence of established risk factors such as smoking, overweight, physical inactivity and changing reproductive patterns associated with urbanization and economic development. According to WHO, cancer is among the leading causes of morbidity and mortality worldwide with approximately 14 million new cases and 8.2 million cancer related deaths in 2012. More than 60% of the world's total new annual cases occur in Africa, Asia and Central and South America. These regions account of 70% of the world's cancer deaths. It is expected that annual cancer cases will escalate from 14 million in 2012 to 22 million within the next 2 decades.

In 2013, World Health Organization (WHO) had launched the global action plan for the prevention and control of non-communicable disease 2013-2020 that aims to reduce premature mortality from cancer and other NCDs by 25%. The World Health Organization Members State agreed that among the indicators of progress in the fight against NCDs is the need to record "cancer incidence, by type of cancer, per 100,000 populations", thus placing an onus on countries to establish population- based cancer registries and to report on the progress.

The National Cancer Registry provides important epidemiological data of cancers, cancer burdens, trending and high risk group identification. The National Cancer Registry is one of the key priorities in the National Cancer Control Blueprint 2008-2015. Previously the National Cancer Registry was run by the Disease Control Division at the Ministry of Health until 2014. Since January 2015, the NCR is now within the jurisdiction of the National Cancer Institute, Putrajaya. Data for the year 2015 and onwards will be handled and managed by the NCI, Cancer Registry Unit.

Cancer registration should never be a goal in itself. The global objective is to improve the quality of life for cancer survivors and outcome of cancer treatments. Registration takes into account prognostic variables and allows individual feedback to all cancer centres on process and outcome indicators. Joint venture researches and the use of cancer registry data by researchers show that the effort invested by all authorities involved in public health has been successful. Let us continue this path to be at par with international examples on population- based cancer researches.

Thank you.

**DATUK SERI DR. S. SUBRAMANIAM**  
Minister of Health, MALAYSIA

## ACKNOWLEDGEMENT

We would like to express gratitude to all individuals and organisations that have directly or indirectly contributed to the Malaysian National Cancer Registry Report, 2007-2011.

### We would like to thank especially the following:

1. The Honourable Minister of Health Malaysia, Y.B. Datuk Seri Dr. S. Subramaniam.
2. Director General of Health Malaysia, YBhg. Datuk Dr. Noor Hisham Bin Abdullah.
3. Deputy Director General of Health Malaysia (Public Health), YBhg. Datuk Dr. Lokman Hakim b. Sulaiman.
4. Deputy Director General of Health Malaysia (Medical), YBhg. Datuk Dr. Jeyaindran Tan Sri Sinnadurai.
5. Deputy Director General of Health Malaysia (Research & Technical Support), YBhg. Datuk Dr. Shahnaz Bt. Murad.
6. Head of Department, Department of Radiotherapy and Oncology, National Cancer Institute, Putrajaya, Dr. Gerard Lim Chin Chye.
7. Deputy Director Health Informatics Centre, Planning Division, Ministry of Health, Malaysia, Dr. Md. Khadzir b Sheikh Haji Ahmad
8. State Health Directors.
9. Deputy State Directors.
10. Oncologists, pathologists, other disciplines specialists, palliative care professionals, and all other members of the medical profession from various government, universities, non-government and private centres.
11. Director of National Registration Department.
12. Medical record departments of all hospitals.
13. All hospitals, institutions, public and private clinics.

We also would like to express our gratitude to all states Epidemiology Officers (NCDCC), Medical Officers, Statisticians, Paramedics, Assistant Record Officers and Clerical Staff at all State Cancer Registries, for continuously collecting and contributing data to the National Cancer Registry.

### Epidemiologist and Medical Officer of State Cancer Registries:

1. **Dr. Zulhizzam Hj. Abdullah**  
Public Health Physician & State Epidemiologist (NCDC), Perlis State Health Department  
  
**Dr. Husna Hakimah Tajau Rahim**  
Medical Officer (NCDC), Perlis State Health Department
2. **Dr. Shahrul Bariyah Ahmad**  
Public Health Physician & State Epidemiologist (NCDC), Kedah State Health Department  
  
**Dr. Muhamad Fadhil Mohamad Marzuki**  
Medical Officer (NCDC), Kedah State Health Department
3. **Dr. Azizah Ab Manan**  
Public Health Physician & State Epidemiologist (NCDC), Penang State Health Department  
  
**Dr. Muhammad Ihsan Suhaidi**  
Medical Officer (NCDC), Penang State Health Department

4. **Dr. Asmah Zainal Abidin**  
Public Health Physician & State Epidemiologist (NCDC), Perak State Health Department
5. **Dr. Norli Abd Jabbar**  
Public Health Physician & State Epidemiologist (NCDC), Selangor State Health Department  
**Dr. Ozrinalifah Omar**  
Medical Officer (NCDC), Selangor State Health Department
6. **Dr. Misliza Ahmad**  
Public Health Physician & State Epidemiologist (NCDC), WP. Kuala Lumpur (WPKL) & Putrajaya State Health Department
7. **Dr. Khalijah Mohd Yusof**  
Public Health Physician & State Epidemiologist (NCDC), Negeri Sembilan State Health Department  
**Dr. Murni Hayati Baharom**  
Medical Officer (NCDC), Negeri Sembilan State Health Department
8. **Dr. Suhaila Osman**  
Public Health Physician & State Epidemiologist (NCDC), Melaka State Health Department
9. **Dr. Yusmah Muhamad**  
Public Health Physician & State Epidemiologist (NCDC), Johor State Health Department  
**Dr. Rahayu Othman**  
Medical Officer (NCDC), Johor State Health Department
10. **Dr. Fatimah A. Majid**  
Public Health Physician & State Epidemiologist (NCDC), Pahang State Health Department  
**Dr. Ruzawati Zahri**  
Medical Officer (NCDC), Pahang State Health Department
11. **Dr. Fatimah Muda**  
Public Health Physician & State Epidemiologist (NCDC), Terengganu State Health Department
12. **Dr. Noor Hashimah Abdullah**  
Public Health Physician & State Epidemiologist (NCDC), Kelantan State Health Department
13. **Dr. Hashimah Basri**  
Public Health Physician & State Epidemiologist (NCDC), Sarawak State Health Department
14. **Dr. Nirmal Kaur A/P Sadhu Singh**  
Public Health Physician & State Epidemiologist (NCDC), Sabah State Health Department  
**Dr. Nafisah Ahmad**  
Medical Officer (NCDC), Sabah State Health Department
15. **Dr. Wan Mohd Harith Wan Mustapa**  
Medical Officer (NCDC), W.P. Labuan State Health Department

**Special gratitude to all stakeholders for their support and valuable comments on the report:**

1. **Dato' Dr. Abd Jamil Abdullah**  
National Advisor for Surgery, Sultanah Nur Zahirah Hospital
2. **Dr. Ami Talib**  
National Advisor for Pathology, Kuala Lumpur Hospital
3. **Dr. Azura Daniel**  
Head of Department, Department of Radiotherapy & Oncology, Kuala Lumpur Hospital
4. **Dato' Dr. Chang Kian Meng**  
National Advisor for Hematology, Ampang Hospital
5. **Prof. Dr. Cheong Soon Keng**  
Dean of Medical & Health Science Faculty, Tunku Abdul Rahman University
6. **Dato' Dr. Fitzjerald Henry**  
National Advisor for Colorectal Surgery, Selayang Hospital
7. **Assc. Prof. Dato' Dr. Fuad Ismail**  
Head of Department, Department of Radiotherapy & Oncology, Universiti Kebangsaan Malaysia Medical Centre
8. **Dato' Dr. Ghazali Ismail**  
National Advisor for Gynaecology Oncology, Sultan Ismail Hospital
9. **Dr. Goh Pik Pin**  
Director of National Clinical Research Centre
10. **Dr. Hishamshah Mohd Ibrahim**  
National Advisor for Paediatric Oncology, Kuala Lumpur Hospital
11. **Dr. Jamaiah Haniff**  
Head of Unit, Malaysia Health Care Performance
12. **Dr. Jamalul Azizi Abdul Rahaman**  
National Advisor for Respiratory Medicine, Serdang Hospital
13. **Dr. Krishnan Raman**  
National Advisor for Hepatobiliary Surgery, Selayang Hospital
14. **Dr. Lim Teck Onn**  
Senior Consultant, ClinResearch Sdn. Bhd.
15. **Dr. Matin Mellor Abdullah**  
President of Malaysian Oncology Society, Subang Jaya Medical Centre
16. **Dr. Mohd Roslan Haron**  
National Advisor for Radiotherapy & Oncology, Sultan Ismail Hospital

17. **Dato' Dr. Muhammad Radzi Abu Hassan**  
National Advisor for Gastroenterology, Sultanah Bahiyah Hospital
18. **Dato' Sri Dr. N. Premchandran**  
National Advisor for Orthopaedic Surgery, Tengku Ampuan Hafzan Hospital
19. **Dr. Nor Aina Emran**  
National Advisor for Breast and Endocrine Surgery, Kuala Lumpur Hospital
20. **Prof. Dr. Nur Aishah Mohd Taib**  
Breast Surgeon, Department of Surgery, University Malaya Medical Centre
21. **Dr. Richard Lim Boon Leong**  
National Advisor for Palliative Medicine, Selayang Hospital
22. **Dato' Dr. Rohan Malek Dato' Dr. Johan Thambu**  
National Advisor for Urology, Selayang Hospital
23. **Dr. Saunthari Somasundram**  
President of National Cancer Society of Malaysia
24. **Datin Dr. Siti Sabzah Mohd Hashim**  
National Advisor for Otolaryngology, Sultanah Bahiyah Hospital
25. **Prof. Dr. Teo Soo Hwang**  
Cancer Research Initiatives Foundation (CARIF), Subang Jaya Medical Centre

**Gratitude also to the international reviewers:**

1. **Mr. Les Mery** (International Agency for Research on Cancer, Lyon, France)  
Global Programme Manager, Global Initiative for Cancer Registry Development.
2. **Dr. Suleeporn Sangrajrang** (NCI Bangkok, Thailand)  
Medical Scientist, Expert Level Deputy Director, Health System Development, National Cancer Institute, Thailand.

To all others who had contributed directly and indirectly towards this report.

## SECRETARIAT

The National Cancer Registry (NCR) previously was under the Non-Communicable Disease Sector, Disease Control Division, at the Ministry of Health. Since January 2015, its secretariat had been transferred to the National Cancer Institute in Putrajaya.

### Secretariat of the National Cancer Registry (2007 - 2014)

1. **Dr. Chong Chee Kheong**  
Director of Non-Communicable Disease Sector, Disease Control Division, Ministry of Health
2. **Dr. Zainal Ariffin Omar**  
Deputy Director of Non-Communicable Disease Sector, Disease Control Division, Ministry of Health
3. **Dr. Nor Saleha Ibrahim Tamin**  
Head of Cancer Unit, Non-Communicable Disease Sector, Disease Control Division, Ministry of Health
4. **Dr. Renuga K. Raman (2013-2014)**  
Senior Assistant Director
5. **Puan Raja Rohanira Raja Taib**  
Administrative Assistant
6. **Puan Dayang Pujiah Awang Shamsudin**  
Administrative Assistant

### Secretariat of the National Cancer Registry (Starting from 1st January 2015 until present)

1. **Dr. Asmayani Khalib**  
Director of National Cancer Institute
2. **Dr. Gerard Lim Chin Chye**  
Head of Radiotherapy and Oncology Department, National Cancer Institute
3. **Dr. Renuga K. Raman**  
Medical Officer & Coordinator of Cancer Registry Unit, National Cancer Institute
4. **Dr. Nabihah Ali**  
Medical Officer of Cancer Registry Unit, National Cancer Institute
5. **Dr. Puteri Nureylia Amir**  
Medical Officer of Cancer Registry Unit, National Cancer Institute
6. **Salina Asha'ari**  
Staff Nurse of Cancer Registry Unit, National Cancer Institute

## 1.0 OVERVIEW

---

The first five year report of the Malaysian National Cancer Registry attempts to provide information on cancer incidence from 2007 to 2011 on cases which were reported and recorded in thirteen states and two federal territories. This report will serve as a baseline by which future reports will be compared with. It is recommended that in this report, caution is advised in the interpretation of the incidence of cancer rather than focusing on the absolute numbers and rates of the burden of cancer. The profile of cancer should be looked at in terms of distribution by age, ethnicity, sex and geography. The incidence varies between states partially due to the difference of population structure, for example the incidence rates in Penang are among the highest and this could be due to higher proportion of Chinese in Penang compared to other states.

### 1.1 Cancer Incidence

A total number of 103,507 new cancer cases were diagnosed in Malaysia during the period of 2007 to 2011. Of these 46,794 (45.2%) were reported in males and 56,713 (54.8%) in females. The age standardised incidence rates (ASR) for males and females were 86.9 and 89.0 per 100,000 population in males and females respectively. The ASR in Chinese males were 112.9 per 100,000 population while in females were 126.2 per 100,000 population, Malay males were 70.7 per 100,000 population and females were 81.9 per 100,000 population, Indian males were 70.4 per 100,000 population and females were 110.1 per 100,000 population. The five most common cancers among males were cancers of the colorectal, lung, nasopharynx, lymphoma and prostate. Among females, the five most common were cancers of the breast, colorectal, cervix uteri, ovary and lung.

Further analysis was done based on six regional registries which were established before 2007 (Penang, Kelantan, Pahang, Johor, Sabah, Sarawak). The ASR were higher compared to the incidence based on all state registries which were 100.0 per 100,000 population in males and 109.0 per 100,000 population in females. As the period of coverage of the report begins in 2007, and since registries generally require several years of operation before they attain adequate levels of data quality (defined as completeness of case ascertainment, accuracy and timeliness of reporting), the main concern is underreporting in the nine new registries, for this more time would be required for other registries to mature.

### 1.2 Staging

The stage of cancer at the time of diagnosis was reported based on information provided by the notifying clinician. The staging system was based on the TNM Classification System for most tumour sites. In total 51.0% of recorded cases had reports on staging, of those cases whose staging was recorded, 17.1% in stage I, 23.6% in stage II, 23.0% in stage III and 35.8% in stage IV.

## 2.0 INTRODUCTION

---

Ministry of Health has started its population-based cancer registry in 1993. It was started with regional population-based cancer registries to ensure long term sustainability. Penang was chosen as a pilot location in 1994 to cover northern region. Following this, other regional registries were established in Sarawak, Kelantan, Pahang, Johor and Sabah. Since 2007 all states in Malaysia had set up their own population-based registries which were headed by National Cancer Registry in the Ministry of Health under the Non-Communicable Disease Sector, Disease Control Division. The secretariat for the NCR has been transferred to the National Cancer Institute (NCI) since 1st January 2015.

Cancer is one of the leading causes of death in Malaysia today. This report aims to provide an epidemiological profile of cancer, which is important in the National Cancer Control Programme. Cancer represents a tremendous burden on patients, families and the society they live in. Besides financial cost, cancer has an important psychosocial effect on patients and their families.

Specification of cancer incidence with varying degrees of confidence is fundamental for cancer control. These data do not only establish the burden of disease as it may impinge upon public health and clinical services planning, they also indicate in many instances, causative relationships, the impact of socioeconomic differences and priorities that maybe accorded to particular cancer control options.

This is the first five year national report which covers the period of 2007-2011. This MNCR report follows reports for 2003-2005, 2006, 2007 and 2008. The initial reports only covered cancer incidence among all residents in Peninsular Malaysia. Meanwhile the subsequent reports in 2007 and 2008 covered residents in all states in Malaysia. This 2007-2011 report applied to Malaysian citizens living in Malaysia at the time of diagnosis. The population denominator used was the 2009 intercensal population. The Segi World Standard Population (1960) was applied as a reference in calculating the ASR.

## 3.0 BACKGROUND

---

### 3.1 Geography

Malaysia covers an area of about 330,289 sq. km, consisting of Peninsular Malaysia and East Malaysia (Sabah, Sarawak and Federal Territory of Labuan). It is separated by the South China Sea and has its frontier with Thailand, Singapore, Indonesia and Brunei.

Peninsular Malaysia is located south of Thailand, north of Singapore and east of the Indonesian Island of Sumatera. East Malaysia comprises most of the northern part of Borneo and shares borders with Brunei and Indonesia. Located near the equator, Malaysia's climate is categorised as equatorial, being hot and humid throughout the year.

Malaysia is divided into thirteen states and three Federal Territories. Eleven states and two Federal Territories are found in Peninsular Malaysia meanwhile, two states and one Federal Territory are found in East Malaysia.

The Peninsular Malaysia consists of the following states (from north to south): Perlis, Kedah, Pulau Pinang (Penang), Perak, Selangor, Federal Territory of Kuala Lumpur and Putrajaya (WPKL & Putrajaya), Negeri Sembilan, Melaka, Johor, Pahang, Terengganu and Kelantan. The East Malaysia consists of Sabah, Sarawak and Federal Territory Labuan (W.P. Labuan).

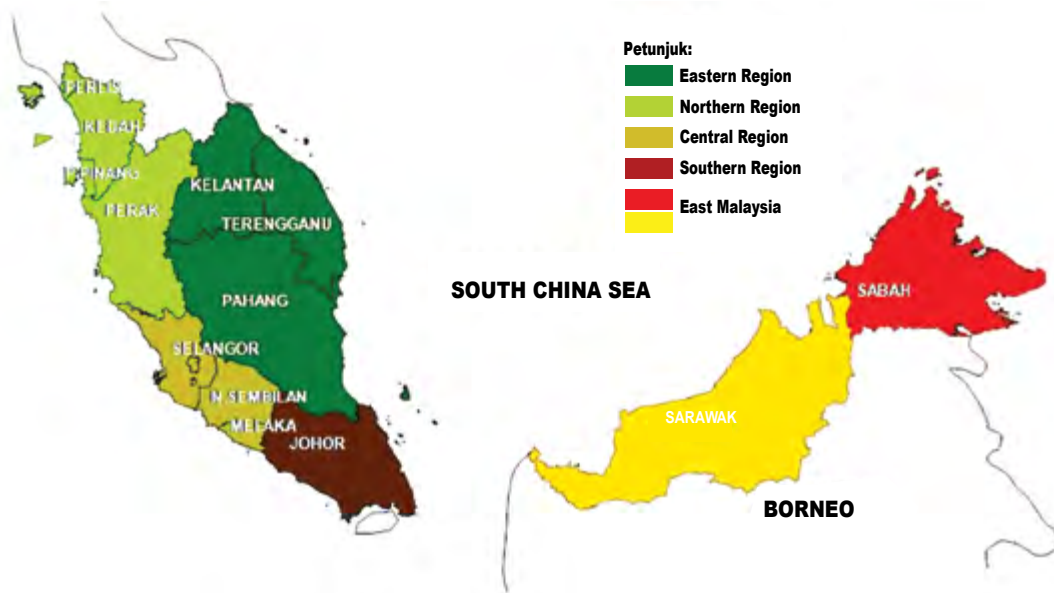

Figure 1: Map of Malaysia

### 3.2 Population

The estimated Malaysian population in 2011 was 29.1 million including the non-citizens. The population pyramid and its distribution of ethnic, sex and age group is shown in Figure 2, Table 2 and Table 3 respectively. Overall, there were 50.7% males and 49.3% females (Table 2). The ethnic distribution was as follows: Malay 54.7%, Chinese 24.3%, Indian 7.3%, other Bumiputera 12.8% and others 0.9%. In addition, there were almost 2.5 million non-citizens (8.4%) in Malaysia (Table 1). Intercensal Population Estimates are data that will be reviewed every ten years after Population and Housing Census is conducted using the final data on births and deaths. The projection is calculated yearly and used the cohort-component method which contained births, deaths, internal and international migration of the reference year. These estimates provide an overview of the growth and potential changes in population in terms of structure and compositions.

### 3.3 Health Status, Socioeconomic and Health Facilities.

The health status of Malaysia has also been enhanced by improvement in health infrastructure and health services. Since Independence in 1957, changes in disease pattern in relation to lifestyle related conditions are occurring. Life expectancy in Malaysia at birth for both sexes has increased over the years, rising from 56 years for males and 58 for females in 1957 to 72.2 years for males and 76.8 years for females in 2011. Over the same period, the crude death rate fell from 12.4 per 1,000 population to 4.7. The average crude birth rate from 2007 to 2011 was 17.66 per 1,000 population and the crude of natural increase in average from 2007 to 2011 was 13.04 per 1,000 population (Department of Statistics Malaysia, Time Series Data). A decrease in perinatal, infant and maternal mortality rates from 2007 to 2011 are viewed in Figure 3. The gross domestic product (GDP) per capita 2007-2011 in Malaysia is depicted in Table 5.

\* Health Facts source Health Informatics Centre, MOH

\* World Development Indicators, World Bank

The following table provides an overview of the health delivery system in Malaysia. An overall number of health facilities and doctors treating all types of diseases are seen in Table 6. From 2007 to 2011 the number of doctors to the population ratio had increased from 1:791 to 1:1,145. Gradual increases in a total number of hospitals were from 371 in 2007 to 409 in 2011. Whereas, there was also increase in hospital beds (Government MOH, Government Non-MOH, and Private) from 51,923 in 2007 to 55,789 in 2011. Other public health facilities include 1Malaysia Clinics, Government (MOH) and Private (GP), form a total of 5,822 in 2007 and have increased to 9,547 by the year 2011.

### 3.4 Cancer Death Certification

A total of 64,275 medically certified and non-medically certified cancer deaths were reported by the National Registration Department of the period 2007 to 2011. Over the years, the numbers of medically certified cancer deaths have gradually increased. However, the number of non-medically certified cancer death remained relatively unchanged (Figure 4). Medically Certified Death was certified by medical practitioners with Malaysian Medical Council, which involves medical officers, district health officers and coroners. Non-medically Certified Death certified by persons such as policemen, medical assistants and other informants. The proportion of medically certified cancer death is 64.3% and non-medically certified cancer death is 35.7% (Figure 5).

Figure 5: Certified and uncertified cancer death, Malaysia, 2007-2011

## 4.0 METHODS

---

### 4.1 Sources of data

The registry sought to obtain basic epidemiological and clinical data on all cases of cancer diagnosed in Malaysia since 1st January 2007, regardless of citizenship, place of stay and basis of diagnosis. The registry received notifications from all data source providers in government and private health facilities (hospitals, clinics, laboratories, Hospice, National Registration Department and Health Informatics, MOH) in Malaysia. The National Cancer Registry team consolidated information from all state registries.

### 4.2. Data Collection

Case registration is based primarily on voluntary notifications. All identified data providers were asked to provide information concerning cancer on the standardised forms as attached in Appendix 100 and were sent to the respective registries. Patient confidentiality was maintained at all times. Both passive and active case finding methods were used by the registries.

**Passive notification** – registry relies on other healthcare workers to complete notification forms and forward them to the registry.

**Active search** – collecting at source, whereby registry staff would visit the sources of data to extract the required information and record it onto forms, or to obtain copies of the relevant information.

To ensure completeness of the data, active case finding and routine checks were done using government and private hospital discharge records, as well as pathology records from the public and private laboratories. These were supplemented by case detection from death records supplied by the National Registration Department. Any cancer case detected from pathology and death records were then checked with previously registered cases. If they were not yet notified, reminders were sent to the person in-charge for more information. Additional missing data for these cases were also sought by registry staff by searching the relevant hospital records.

### 4.3. Registration Procedure

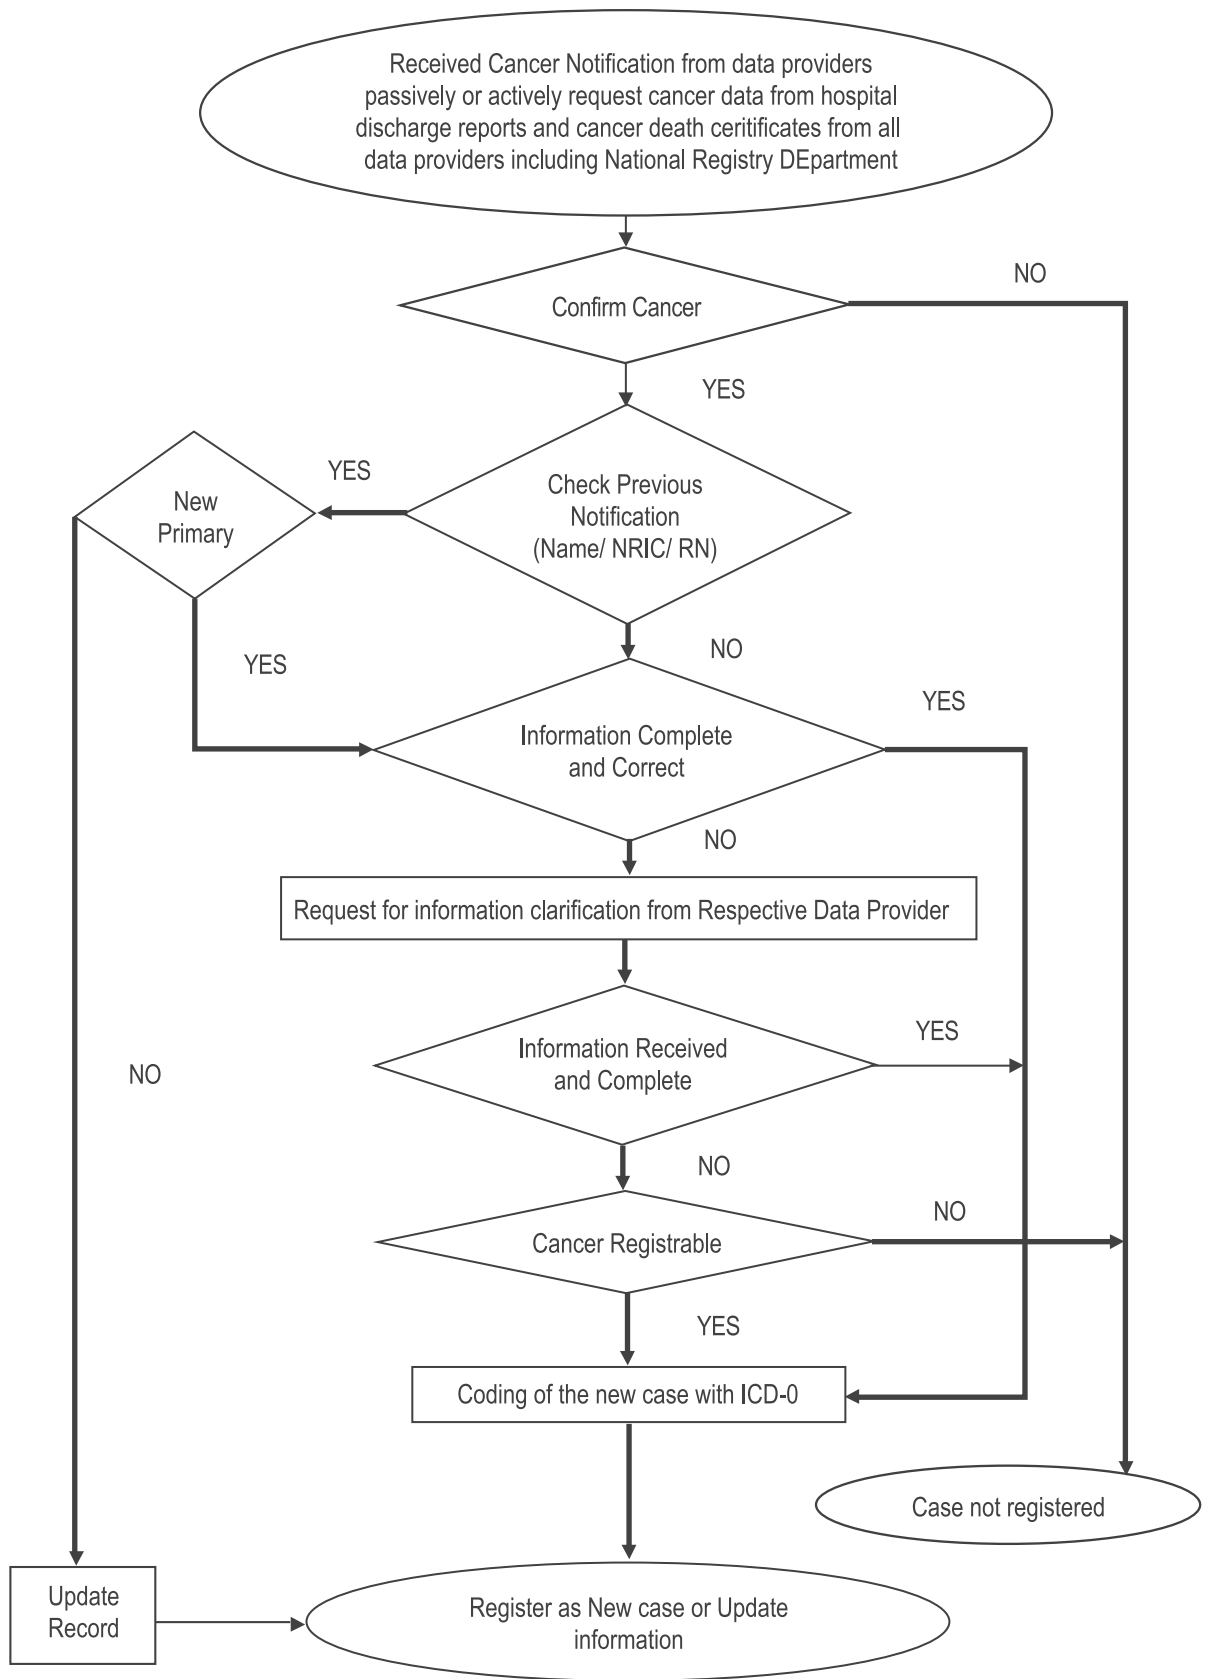

Every item relating to the patient were collated and updated. The registry registered all new cases of cancer diagnosed in Malaysia. Multiple sources of data had assisted in optimising completeness of collection; however, this could create problem of multiple notification of a patient. This issue was addressed by cross checking names, age, date of birth and National Registration Identity Card numbers (NRIC) using CanReg4 software prior to the case registration. Identification card number is a unique number given to each Malaysian citizen and permanent resident. Children below 12 years of age are registered under their mother's identification card number. In this report, the population is divided into 5 ethnic groups which are 'Malay', 'Chinese', 'Indian', 'Other Bumiputera' and 'Others'. 'Other Bumiputera' refers to indigenous peoples, natives of Sarawak and Sabah meanwhile, 'Others' refers to ethnic groups which are not mentioned in other ethnic groups. The CanReg program accommodates comparison of essential variables across cases. 80% conformity is the standard used to trigger a further check of duplication. If the patient has been registered before, a check will be done along with the previous notifications to ascertain if it was a new primary. If the cancer is a new primary, the case is registered with a new registration number and if it is not, the records are updated.

Data from hospital discharges and reports from laboratories and death list from National Registration Department (NRD) were also sent to the registry and the same procedures were followed as described above.

Every effort was made to ensure that all the variables were completed. In the event if there was incomplete information, the notification forms with incomplete information were sent back to the respective data providers for further clarification and returned back to the registry upon completion. If there were no clarification, or incomplete forms returned, registries staff would visit the source providers to obtain the required information and to decide whether the case can be registered or not. For most cases the staging used was TNM Classification System. However, for cases with other staging classifications the registry staff assisted in converting it to TNM Classification System too.

Death certificate list were obtained from the National Registration Department, government and private hospitals in the same procedures as explained earlier. Those with mention of cancer on death certificate were identified, and transcripts of associated reports or certificates were used by the registry. If no information was available, then the case would be registered as **Death Certificate Only (DCO)**. All updated information collected on hardcopies, either passively or actively, were entered into the computer database. Electronic data maintained in the cancer registry databases were subjected to on-going quality control.

NRIC: National Registration Identification Card, RN: Registration Number, ICD-O: International Classification of Disease for Oncology

Figure 6: Outline of registration procedure

## 4.4 Quality control

In order to achieve a high validity and accuracy of data the Malaysian National Cancer Registry (MNCR) has used the same five common indices as indicated in the Cancer Incidence in Five Continents (CI5), Vol X, which are (a) Internal consistency; (b) Histological verification; (c) Death certificate only (DCO); (d) Other and unspecified cases (ill-defined cases ) and (e) Age unknown.

All data supplied for this report were coded to ICD-O-3 and then were converted to ICD-10 for analysis and report writing. To ensure data comparability, all cases notified to the registry must follow the IARC rules.

## 4.5 Description of statistical methods

### 4.5.1 Crude incidence rate (CR)

The number of new cancer cases (incidence cases) observed in the population during a defined period, divided by the number of population at risk in the same period. It is usually expressed per 100,000.

$$CR = N / P \times 100,000$$

N – Total number of new cancer cases

P – Person-years at risk

### 4.5.2 Age-specific rate (AR)

Incidence rate in a specified five-year age group; calculated by dividing the number of cancer cases in the five-year age group by the Malaysian population in the particular age group and multiply by 100,000.

$$AR = N_i / P_i \times 100,000$$

$N_i$  - Number of new cancer occurring in the  $i^{\text{th}}$  age group

$P_i$  – Person-years at risk in the  $i^{\text{th}}$  age group

### 4.5.3 Age-standardised rate (ASR)

Since the incidence of cancer depends heavily on the age structure of the population, there is a need for age adjustment for comparative analysis. The age-standardised incidence rate is a summary measure, indicating the rate that a population would have if it had a standard age structure.

It is calculated by summing the age-specific rates weighting to the world standard population; the calculated incidence rate is then called the World Standardised incidence rate. It is also expressed per 100,000.

$$ASR = \sum (AR_i \times P_{i.std}) / \text{total world standard population}$$

$AR_i$  - Age specific rate in the  $i^{\text{th}}$  age class

$P_{i.std}$ - The number in the  $i^{\text{th}}$  age class of world standard population

### 4.5.4 Standard error (SE)

As with any measurement of a population, incidence rates have a certain amount of chance variation. The index measure of this variability is known as the standard error and is computed as follows:

$$SE = \sqrt{\sum_i d_i (w_i / y_i)^2}$$

$d_i$  - Number of cases of the cancer of interest in the age class  $i$

$w_i$  - Standard world population for age class  $i$

$y_i$  - Person-years at risk for age class  $i$

#### 4.5.5 95% Confidence Limit of ASR (95% CL)

ASRs are subject to random variation around the true underlying rate. 95% confidence limits are endpoints of a range in which the true rate would be expected to fall 95% of the time. 95%CLs are computed from the standard error (SE) of the ASR using the following formula:

$$95\% \text{ CL} = \text{ASR} \pm (1.96 \times \text{SE})$$

#### 4.5.6 Cumulative rate (CR74)

Cumulative rate is the weighted sum of age-specific incidence rates until completion of 74 years of age. The weighting used in this calculation is based simply on the widths of the age groups, i.e. multiplying the five-year age-sex specific rates per person by 5 and summing over age groups from 0-4 to 70-74. CR74 is necessary in order to ascertain the cumulative risk and is expressed in percentages.

$$\text{CR74} = 5 \times \sum_i (d_i / y_i) \times 100$$

i - 5-year age groups

$d_i$  - Number of cases in age class i

$y_i$  - Person-years at risk of age class i

#### 4.5.7 Cumulative risk (CumR)

Cumulative risk is defined as a probability that an individual would develop cancer during a certain age period, in the absence of any competing cause of death. The age period over which the risk is accumulated in this report is 0-74 years. The precise mathematical relationship between the cumulative rate and the cumulative risk is:

$$\text{CumR} = 100 \times [1 - \exp(-\text{CR74}/100)]$$

exp - exponential

#### 4.5.8 Lifetime risk

Lifetime risk is defined as the likelihood that a person who is free of a certain type of cancer will develop or die from that type of cancer during his or her lifetime. Lifetime risk estimates are usually expressed as the odds of developing cancer ('1 in x') or as a percentage.

## 5.0 RESULTS

### 5.1 Overall cancer incidence

A total of 103,507 new cancer cases were diagnosed in Malaysia for the period of 2007- 2011.

The age-standardised rates (ASR) were 86.9 per 100,000 males and 99.3 per 100,000 females. The cumulative risk (CumR) was 9.8 for males and 10.6 for females, representing the risks of males and females in Malaysia developing cancer before the age of 75, in the absence of other causes of death. The lifetime risk for males was 1 in 10 and 1 in 9 for females (Table 7). The incidence was highest among Chinese for both sexes (ASR: 112.9 per 100,000 population in male and 126.2 per 100,000 populations in female).

**Table 7: Number of new cancer cases, Crude Rate (CR), Age-standardised rate (ASR), Cumulative Risk (CumR) and Lifetime Risk by sex, Malaysia, 2007-2011**

Sex	Number	%	CR	ASR	CR74	CumR	Lifetime Risk
Males	46,794	45.2	71.4	86.9	10.3	9.8	10
Females	56,713	54.8	89.0	99.3	11.2	10.6	9
<b>Both</b>	<b>103,507</b>	<b>100.0</b>					

**Table 8: Incidence summary by major ethnic groups and sex, Malaysia, 2007-2011**

Ethnicity	Male				Female			
	Number	CR	ASR	CumR	Number	CR	ASR	CumR
Malay	18,757	53.1	70.7	8.0	24,188	69.5	81.9	8.7
Chinese	20,424	124.4	112.9	12.5	22,114	143.2	126.2	13.2
Indian	2,679	56.0	70.4	8.1	4,798	101.2	110.1	12.2
Others*	4,934	55.0	80.5	9.2	5,613	64.4	89.6	9.7

\* *Other Bumiputera and Others: 'Other Bumiputera' includes indigenous peoples, natives of Sarawak and natives of Sabah while 'Others' other than mentioned before not including missing ethnicity.*

A comparison of age-standardised rates in Table 9 ranging from 51 to 151 per 100,000 in males and 42 to 158 per 100,000 in females are due to the difference in population structure and size. The small population in Labuan could also contribute to the limitation of the report and the rates could fluctuate in such instances.

**Table 9: Incidence summary by state and sex, Malaysia, 2007-2011**

State	Male			Male		
	Number	CR	ASR	Number	CR	ASR
Selangor	6,261	49.3	71.3	8,484	69.2	89.7
Johor	7,202	91.8	109.0	8,110	109.4	118.7
Sabah	3,522	58.9	93.6	4,045	69.8	105.3

Pahang	2,193	60.9	75.1	2,499	73.6	82.6
Terengganu	1,668	63.7	83.1	1,977	79.1	93.8
Negeri Sembilan	1,917	79.0	89.1	2,528	106.9	108.9
Melaka	1,811	94.2	104.7	2,214	110.2	108.1
Perlis	405	46.2	72.8	495	86.4	84.9
W.P. Labuan	53	26.5	50.9	51	26.8	41.7

The cancer incidence reported in this publication is different from the estimates of WHO publication in Globocan 2012. The incidence rate reported by Globocan was higher compared to MNCR. The WHO Globocan data was an estimate with the purpose of comparing the distribution of cancer cases in the world. This comparison was done among countries using best available data for the respective countries. The estimation of ASR for Malaysia was based on Penang and Sarawak Registries where the ethnic distributions were not similar to the national distribution.

**Table 10: ASR by sex comparing Malaysia, Penang, Sarawak Cancer Registry 2007-2011 and Globocan 2012**

State	ASR	
	Male	Female
Malaysian National Cancer Registry (total of 15 states)	86.9	99.3
Globocan 2012	144.9	143.4
Penang Cancer Registry	150.5	157.8
Sarawak Cancer Registry	85.7	100.2

*\*Globocan 2012: Simple mean of the incidence rates recorded in Peninsular Malaysia, Penang (2006), Penang (2004-2008) and Sarawak (1998-2002)*

**Figure 7: Age-standardised rate (ASR) by state and sex, Malaysia, 2007-2011**

## 5.2 Cancer trends

The annual cancer incidence in Malaysia varied over the 5 years (2007-2011) in males between 80.9 and 90.2, and in females between 93.8 and 102.6.

Figure 8: Annual age-standardised rate (ASR) by sex, Malaysia, 2007-2011

### 5.3 Incidence of ten most common cancers

The three most common cancers among Malaysian residents were breast followed by colorectal and lung (Table 11 and Figure 9). The most common cancer among male and female residents was colorectal and breast respectively (Table 12 and Figure 10).

**Table 11: Ten most common cancers, all residents, Malaysia, 2007-2011**

ICD-10	Sites	Number	%
C50	Breast	18,343	17.7

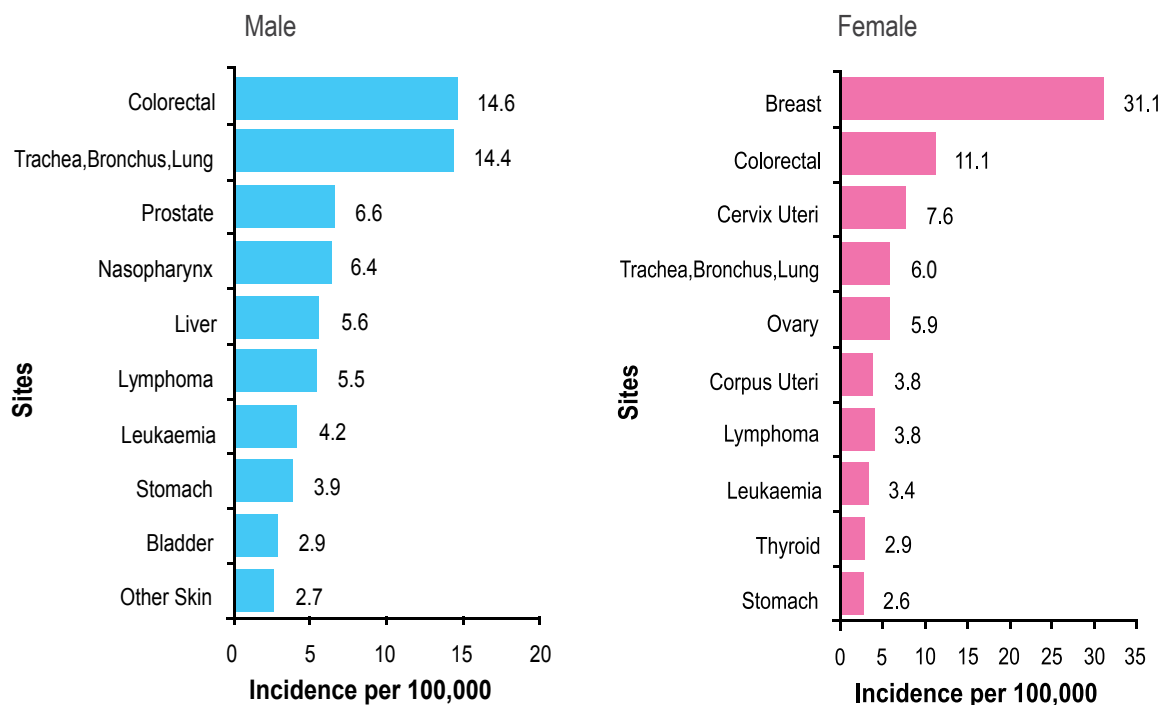

Figure 10: Age-standardised rate (ASR) for ten common cancers by sex, Malaysia 2007-2011

### 5.4 Age variations

The incidence of cancer increased for both males and females after the age of 30 years (Figure 11). The incidence rate in males exceeded the incidence rate in females after the age of 60 years.

Figure 11: Age-specific incidence rate by sex, all sites, Malaysia, 2007-2011

Figure 12: Age-specific incidence rate for ten common sites, males, Malaysia, 2007-2011

Figure 13: Age-specific incidence rate for ten common sites, females, Malaysia, 2007-2011

## 5.5 Age groups and cancers

The five most common cancers by sex in each of the five broad age groups are shown in Figures 14-18.

In children below age of 14 years, main cancers in both sexes were leukaemia (47.1% in males, 45.5% in females) followed by brain, nervous system (13.8% in males, 16.0% in females) and lymphoma (11.3% in males, 8.4% in females). Childhood cancer age 0 to 18 years old comprised of 3,829 cases, 2,131 (55.7%) cases were males and 1,698 (44.3%) cases were females.

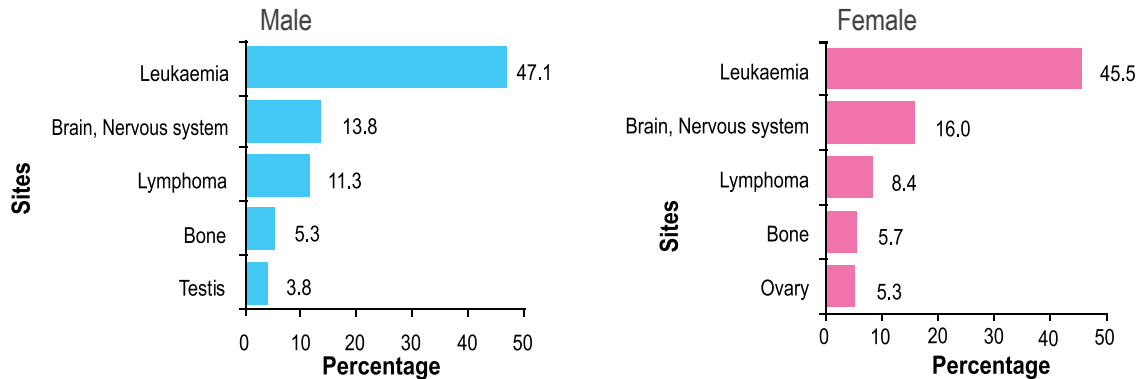

Figure 14: Common cancers among 0-14 years age group by sex, Malaysia, 2007-2011

In the 15-24 year age group, the most common cancers in males were leukaemia (23.0%) followed by lymphoma (20.9%) and bone cancer (9.4%). While in females, the most common cancers were lymphoma (17.7%) followed by leukaemia (15.3%) and ovarian cancer (14.5%).

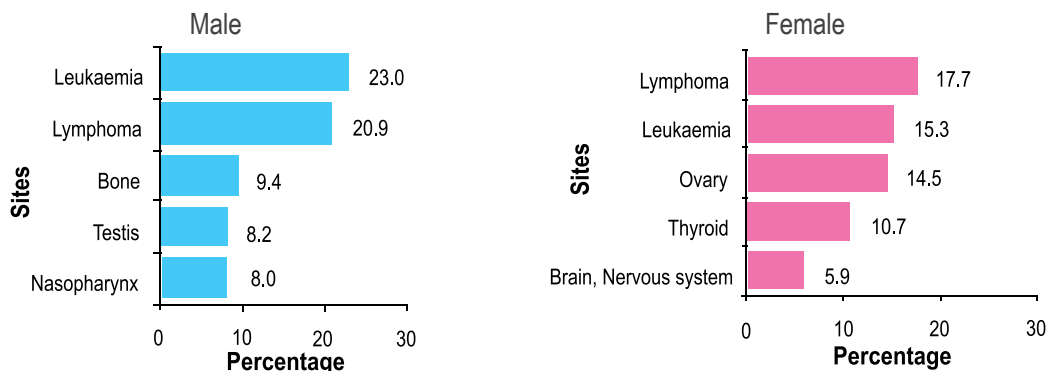

Figure 15: Common cancers among 15-24 years age group by sex, Malaysia, 2007-2011

In the group aged 25-59 years, colorectal cancer was the most common cancer in males (16.0%), followed by nasopharyngeal cancer (13.7%), and lung cancer (13.4%). The most common cancers seen in females were breast (40.7%), cervix uteri (8.9%) and colorectal cancers (7.6%).

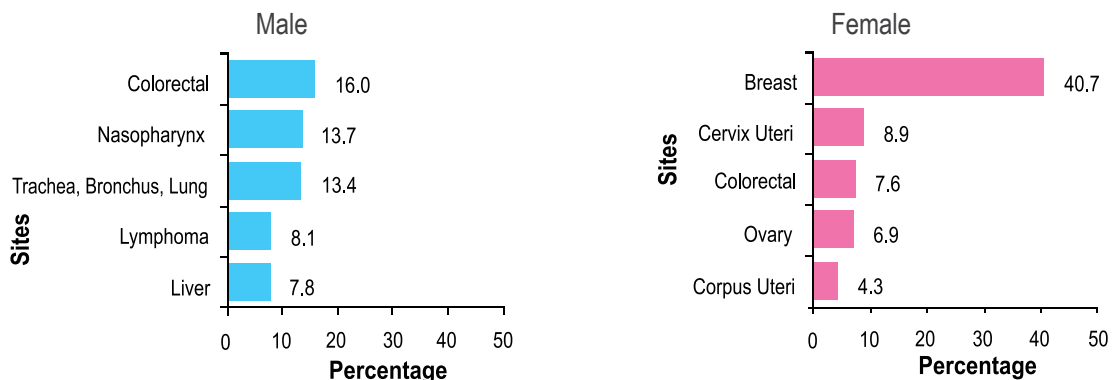

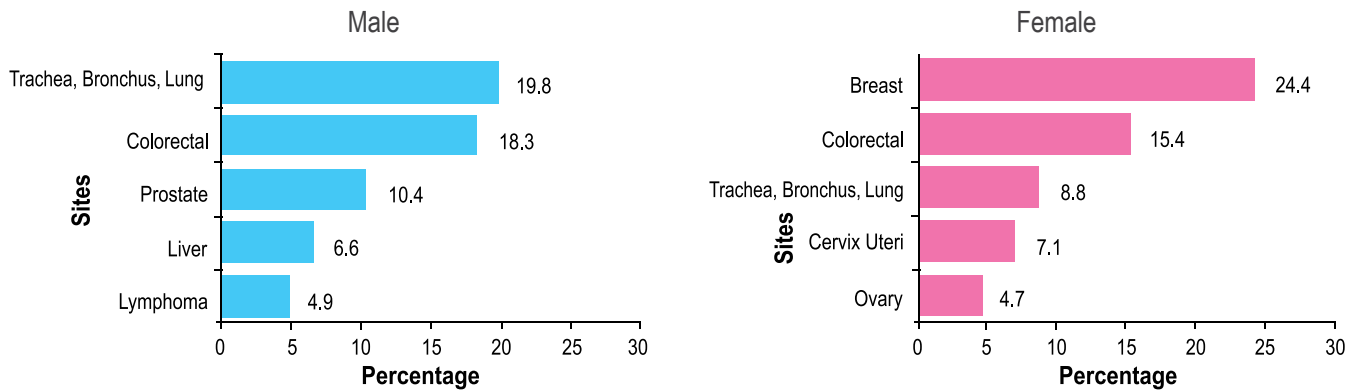

Figure 16: Common cancers among 25-59 years age group by sex, Malaysia, 2007-2011

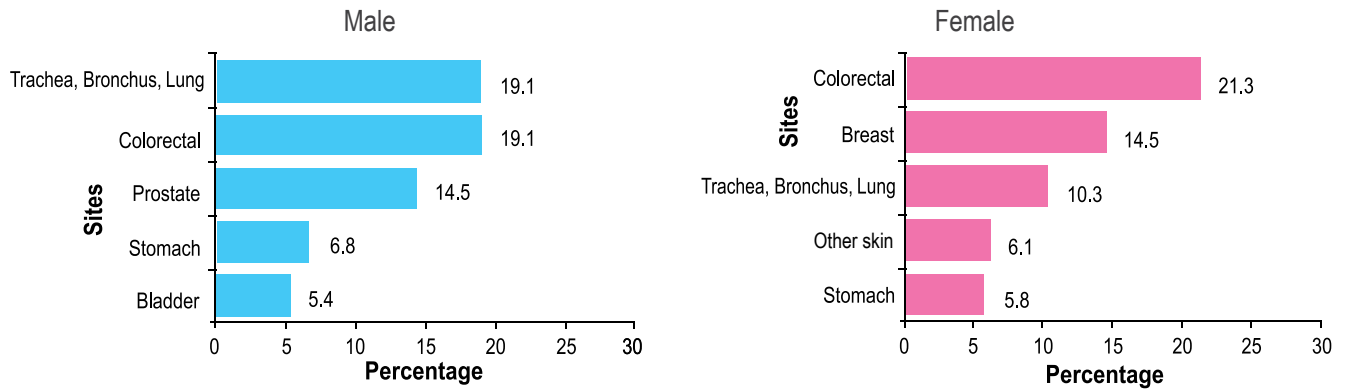

In the 60-74 year age group, the most common cancers in males were lung (19.8%), colorectal (18.3%) and prostate cancers (10.4%). In females the most common cancers were breast (24.4%), colorectal (15.4%) and lung cancers (8.8%).

**Figure 17: Common cancers among 60-74 years age group by sex, Malaysia, 2007-2011**

In the group aged 75 years and above, cancer of the lung remained the most common cancer among males (19.1%) followed by colorectal (19.1%) and prostate cancers (14.5%). In females, colorectal cancer (21.3%) was followed by cancer of the breast (14.5%) and lung (10.3%).

**Figure 18: Common cancers in 75 years and above age group by sex, Malaysia, 2007-2011**

## 5.6 Ethnic variations

The incidences of cancer among the ethnic groups for ten common cancers are shown in Table 13 and Table 14. In males, the incidence of colorectal, lung, nasopharynx, prostate, and liver cancers were more common in Chinese whereas leukaemia and bladder cancers were more common in Malays. In females, the incidence of breast, colorectal, ovarian and lung cancers were more common in Chinese whereas leukaemia and thyroid cancer were more common in Malays.

**Table 13: Age-standardised rates for ten most common cancers in males by ethnicity, Malaysia, 2007-2011**

Sites	Ethnic Groups			
	Malay	Chinese	Indian	Others*
Colorectal	11.3	21.1	10.3	9.4
Trachea, Bronchus, Lung	12.6	18.8	7.6	11.9

Summary table for all cancer sites is shown in Table 19. A total of 103,507 new cancer cases were reported, of whom 52,794 (51.0%) had reports on staging. Of the patients whose stages were reported, 9,029 (17.1%) were in stage I, 12,445 (23.6%) in stage II, 12,135 (23.0%) in stage III and 18,885 (35.8%) in stage IV. Thus at the time of diagnosis, 31,020 (58.8%) had advanced cancers (classified as either stage III or IV).

## 5.8 Data Quality

The Data Quality in this report were measured through data completeness, comparability and validity. Validity can be defined as the proportion of cases in a data-set which truly have the reported attribute. The Malaysian National Cancer Registry (MNCR) has used the same five common indices as indicated in the Cancer Incidence in Five Continents (CI5), Vol X, which are (a) internal consistency; (b) histological verification; (c) death certificate only (DCO); (d) other and unspecified cases (ill-defined cases ) and (e) age unknown.

- (a) Internal consistency: The MNCR uses the IARC/IACR CHECK program to perform consistency checks on the cancer notifications. All cases queried are checked by the registry staff, using the software program, before incorporating relevant items into the database.
- (b) Histological verification: The accuracy of the stated diagnosis is likely to be higher if there is histological confirmation by a pathologist or cytology/haematology confirmation. As the MNCR does not distinguish between histology and cytology/haematology verification, morphologically verified (MV) is used rather than histological verification. For cancers with specified sites, the morphologically verified proportion was **96.6%** of all cases for both sexes.
- (c) Death Certificate Only (DCO): All the death notified by the public, private health facilities to the registry was traced and checked with the National Registry Departments. For cancer with specified sites, the DCO percentage was **0.3%** of total cases for both sexes.
- (d) Other and unspecified cases (ill-defined cases): For this category, the percentage was **2.7%** (**1.6%** for males and **1.1%** for females) A low proportion of cases that are assigned to this category generally imply a better diagnostic precision in determining the site of primary cancer.
- (e) Age unknown: If there are a large number of cases with age unknown, several of the figures and graphs from the data-set would not be accurate. In this report, all the ages were known.

## 7.0 COMMENTARY ON 15 SELECTED CANCER SITES

In this section, cancers are reviewed focussing on ethnic variations, staging, Age-specific incidence rate as well as annual and state distributions. International comparisons were made with Singapore (Singapore Cancer Registry, Interim Report: Trends in Cancer Incidence in Singapore 2009-2013) and other countries (Cancer Incidence in Five Continents Volume X, 2014). Fifteen most common cancers (male and female combined) were selected.

### 7.1 Female Breast (ICD-10: C50)

Female breast cancer was accounted for 32.1% of all cancer among females in Malaysia. The incidence of breast cancer was highest among Chinese followed by Indian and Malay.

The cumulative risk (CumR) was highest among Chinese and lowest among Malay. The lifetime risk was 1 in 30, while for Chinese was 1 in 22, Indian 1 in 24 and Malay 1 in 35. The percentage of breast cancer detected at stage I and II was 56.9%.

**Table 23: Female Breast: Number, Crude Rate (CR), Cumulative Rate (CR74), Age-Standardised Rate (ASR) and Cumulative Risk (CumR), Malaysia, 2007-2011**

Sex	No.	CR	CR74	ASR	(ASR 95%CL)	CumR
Female	18,206	28.6	3.4	31.1	(30.7, 31.6)	3.4

**Table 24: Female Breast: Incidence summary by ethnicity, Malaysia, 2007-2011**

Ethnic	No.	CR	CR74	ASR	CumR
Malay	8,225	23.6	2.9	27.2	2.9
Chinese	7,333	47.5	4.6	41.5	4.5
Indian	1,705	36.0	4.2	37.1	4.2

**Table 25: Female Breast: Incidence summary by year, Malaysia, 2007-2011**

Year	No.	CR	CR74	ASR	CumR
2007	3,579	29.0	3.5	32.3	3.4
2008	3,643	28.8	3.5	32.0	3.5
2009	3,501	27.5	3.3	29.9	3.3
2010	3,717	28.7	3.4	30.8	3.3
2011	3,766	28.7	3.4	30.4	3.3

Figure 27: Female Breast: International comparisons – Age-standardised rates

## 7.2 Colorectal (ICD10: C18-C21)

Colorectal cancer was the most common cancer in male and second in female. The incidence of colorectal cancer increases with age and highest among Chinese for males and females. The lifetime risk for males was 1 in 56. It was 1 in 39 for Chinese, 1 in 72 for Malay and 1 in 82 for Indian. The lifetime risk for females was 1 in 74; for Chinese 1 in 49, Indian 1 in 91 and Malay 1 in 100. The male to female ASR ratio was 1.3:1.

The percentage of colorectal cancer detected at stage I and II was only 34.1% and 34.8% respectively for both male and female.

### 7.3 Trachea, Bronchus, Lung (ICD-10: C33-C34)

Lung cancer is the second most common cancer among males and fifth among females in Malaysia. The incidence increased with age and the peak of age-specific incidence rate was at the age of 70 and above.

The lifetime risk for males was 1 in 55. For Indian, Malay and Chinese, it was 1 in 103, 1 in 62 and 1 in 43, respectively. The lifetime risk for females was 1 in 135. For Indian it was 1 in 255, 1 in 185 for Malay and 1 in 97 for Chinese. The male to female ASR ratio was 2.4:1.

Most of lung cancer cases were detected at late stage (stage III and stage IV) for both sexes.

## 7.4 Lymphoma (ICD10: C81-C85; C96)

Lymphoma ranked fourth in males and sixth in females. Malay males had the higher rate compared to Chinese and Indian.

The lifetime risk for males was 1 in 167; 1 in 229 for Indian, 1 in 177 for Chinese and 1 in 165 for Malay. The lifetime risk for females was 1 in 247; 1 in 285 for Indian, 1 in 253 for Malay and 1 in 248 for Chinese.

## 7.5 Nasopharynx (ICD10:C11)

Nasopharynx was the fifth most common cancer in Malaysian population and third most common in males. The lifetime risk for males was 1 in 143 and for females was 1 in 417. The incidence in males increased at the age of 25 years old and peaked at the age of 65 years old.

Most of nasopharynx cancer cases in males were detected at stage III and IV (63.6%).

## 7.6 Leukaemia (ICD-10: C91-C95)

Leukaemia is the sixth most common cancer in Malaysian population and seventh most common in males and eighth most common in females. It is the most common cancer among 0-14 years old. Malay had the highest rate followed by Chinese and Indian in both sexes. The lifetime risk for males was 1 in 275 and for females was 1 in 348.

## 7.7 Cervix Uteri (ICD-10:C53)

Cancer of the cervix uteri was the third most common cancer in females. The lifetime risk was 1 in 116. Chinese had higher incidence rate followed by Indian and Malay. The cumulative risk (CumR) for Chinese was 1.2, Indian 0.9 and Malay 0.6. The incidence rate over the five years was found to have decreased from 8.4 to 6.5.

Almost 60% of cervix uteri cancer cases were detected at stage I and II.

## 7.8 Liver (ICD-10:C22)

Liver cancer is the eighth most common cancer among Malaysian population and sixth most common cancer among males. The incidence of liver cancer increased with age and higher in males compared to females. Chinese were found to have higher incidence rate compared to Malay and Indian. The lifetime risk was 1 in 144 for males and 1 in 418 for females.

Most of liver cancer cases were detected at late stage (stage III and stage IV) for both sexes.

## 7.9 Ovary (ICD10: C56)

Ovary cancer was ninth most common cancer in all residents and fourth in female. The incidence was highest among Chinese followed by Indian and Malay. The lifetime risk was 1 in 158. For Chinese 1 in 147, Indian 1 in 153 and Malay 1 in 159. Forty four per cent of ovary cancer cases were detected at stage I and II.

## 7.10 Stomach (ICD10: C16)

Cancer of the stomach was eighth most common cancer in males and tenth in females. The incidence of stomach cancer increased with age. The incidence was highest among Chinese followed by Indian and Malay for both sexes.

The lifetime risk for males was 1 in 215 and for females was 1 in 326. For males, it was 1 in 156 for Chinese and Indian, and 1 in 489 for Malay. For females, it was 1 in 223 for Chinese, 1 in 268 for Indian and 1 in 733 for Malay.

Most of stomach cancer cases were detected at late stage (stage III and stage IV) for both sexes.

## 7.11 Prostate (ICD10: C61)

Prostate cancer was fifth in male and eleventh most common cancer in all residents. The incidence of prostate cancer increased with age. The incidence was highest among Chinese followed by Indian and Malay. The lifetime risk was 1 in 117. It was 1 in 86 for Chinese, 1 in 124 for Indian and 1 in 146 for Malay. The percentage of prostate cancer detected at stage I and II was 40%.

## 7.12 Other Skin (ICD10: C44)

Skin cancer other than melanoma ranked twelve among all residents, ten most common cancer in males and fourteenth in females. The cumulative risk (CumR) for males was 0.3 and females 0.2. The incidence rate was highest among Chinese in both sexes.

The lifetime risk for males was 1 in 317. Among Chinese male, it was 1 in 237, Malay 1 in 402 and Indian 1 in 642. The lifetime risk for females was 1 in 466. For Chinese female, it was 1 in 388, Indian 1 in 627 and Malay was 1 in 633.

Staging was reported for 436 cases in males and 319 cases in females. Of these 71% were diagnosed at stage I and II in males and 73% in females.

### 7.13 Thyroid (ICD10: C73)

Thyroid cancer was ranked seventeenth among males and ninth among females. The incidence rate was the highest among Malays in both sexes.

The lifetime risk was 1 in 884 for males and 1 in 336 for females, whereas among Malay males 1 in 734 and females 1 in 284.

Staging was reported for 213 cases in males and 671 cases in females, 48% were diagnosed at stage I and II in males and 60% in females.

## 7.14 Brain, Nervous system (ICD10: C70-C72)

Cancer of the brain and nervous system were ranked as eleventh most common cancer in males and thirteenth in females. Chinese have the highest incidence rate followed by Malay and Indian in both sexes.

The lifetime risk for males was 1 in 533, of these Chinese was 1 in 480, 1 in 550 in Malay and 1 in 587 in Indian. Whereas, for females was 1 in 563, Chinese 1 in 530, Malay 1 in 560 and Indian 1 in 636. 39% was detected at stage I and II in males and 51% in females.

**Table 62: Brain, Nervous system: Number, Percentage, Crude Rate (CR), Cumulative Rate (CR74), Age-Standardised Rate (ASR) and Cumulative Risk (CumR) by sex, Malaysia, 2007-2011**

## 7.15 Corpus Uteri (ICD10: C54)

Corpus uteri cancer was the seventh most common cancer in females. The incidence was highest among Chinese followed by Indian and Malay. The lifetime risk was 1 in 224, 1 in 170 for Indian, 1 in 175 for Chinese and 1 in 263 for Malay.

Staging was reported for 1,442 cases, of which 66% were diagnosed at stage I and II

CANCER NOTIFICATION FORM  
(explanatory notes overleaf)

CONFIDENTIAL

Cancer Registry Unit  
c/o Institut Kanser Negara  
No, 4 Jalan P7, Presint 7  
62250 Putrajaya,  
Malaysia.  
Tel : 03-88925555 Fax: 03-88925625

FOR REGISTRY USE

Case No. CR4: \_\_\_\_\_

Pending  Confirmed

Mode of Notification

1. Spontaneous 3. Other  
2. On request 4. Active Search

**1. PATIENT**

Identification No:   
[Malaysia New IC]

Old I/C No:   
[Malaysia Old I.C/ Police/ Arm Force/ Passport]

Nama: \_\_\_\_\_

Usual Residential Address: \_\_\_\_\_  
Post Code:  State: \_\_\_\_\_ District: \_\_\_\_\_

Date of Birth: / /   
DD / MM / YY  
Age   
Ethnic Group: 1  Malay 77  Indonesian  
2  Chinese  
3  Indian  
88  Other .....  
[Please Specify]  
Sex: 1.  Male  
2.  Female  
Citizen: 1.  Malaysian  
2.  \*Non Malaysian  
.....  
[\*Please Specify]

**2. SOURCE OF INFORMATION**

1.  Hospital/ Clinic \_\_\_\_\_  
Reg No.: \_\_\_\_\_  
2.  Pathology Lab \_\_\_\_\_  
Lab No.: \_\_\_\_\_  
3.  Other Sources: \_\_\_\_\_

**6. STAGE OF DIAGNOSIS [at time of diagnosis]**

Stage I  Stage IV  
 Stage II  Unknown  
 Stage III  
Lymph mode involvement 1.  Yes 2.  No  
Remote Metastases 1.  Yes 2.  No

**3. DIAGNOSIS [specify primary organ/site cancer/  
exact location/ laterality if possible]**

Topography (site) : \_\_\_\_\_  
Morphology (histology) : \_\_\_\_\_

**7. TYPE OF TREATMENT [at started treatment]**

None  Surgery  
 Chemotherapy ( \_/\_/\_ )  Radiotherapy ( \_/\_/\_ )  
 Hormonal ( \_/\_/\_ )  Unknown  
 Others \_\_\_\_\_ ( \_/\_/\_ )

**4. DATE OF DIAGNOSIS**  /  /   
DD / MM / YY

**8. PRESENT STATUS**

1  Alive 2  Dead  
Date of last seen:  /  /   
If Death, Date of Death:  /  /   
Cause of Death: \_\_\_\_\_

**5. BASIS OF DIAGNOSIS**

0 Death Certificate only  6 Histology of a metastasis  
 1 Clinical  7 Histology of a primary tumor  
 2 Clinical investigation  9 Unknown  
 4 Specific tumor markers  
 5 Cytology

**9. REMARKS [if any]** \_\_\_\_\_

DATE OF NOTIFICATION :  /  /   
DD / MM / YY

Notified by: \_\_\_\_\_  
[Name and Designation of Reporting Officer]  
Clinic/Hospital Name: \_\_\_\_\_  
Tel. No:   [ward/ clinic/ hospital]

PLEASE FILL THIS FORM WITH ANY INFORMATION AVAILABLE WITH YOU AND SEND IT AS SOON AS POSSIBLE.  
PLEASE MAINTAIN CONFIDENTIALLY AT ALL TIME THANK YOU FOR YOUR COOPERATION

## APPENDIX 101: EXPLANATORY NOTES FOR COMPLETING CANCER NOTIFICATION FORM

### Please Notify

- a) All case of cancers (i.e. carcinomas, sarcomas, leukaemias and all other malignant tumours) diagnosed or treated in your hospital, clinic or practice.
- b) Confirmed cases of cancer as well as cases of 'probable cancer' in which the diagnosis is based only on clinical finding (i.e. without histological, radiological or other methods of confirmation).
- c) All cases diagnosed in Malaysia regardless of citizenships or place of domicile of the patient.
- d) Cancer cases referred to your hospital/clinic/practice which may have already been notified by the previous attending doctor.
- e) Follow up cases; please use the same form (Fill in name, I/C number, source of information and any other information that is different from the original previous notification form). You may choose to notify only once.

### PROCEDURE

1. Patient
  - Identification No.
    - For Malaysian patient with new I/C No. fill up all the 12 digits and the old I/C No. if available
    - For patient with only old I/C No. fill up his/her I/C No. in the Identification No. boxes.
    - Children below 12 years without NRIC, insert patient's I/C No. with additional M or F in the appropriate boxes indicating mother or father NRIC was used (e.g. A 1234567M)
    - Passport No. Police/ Arm Forces Identification Card Number to be used for foreigners/ police/ arms personnel. (please indicate)
  - Name – Full name in block letters as in NRIC/ passport
  - Usual Resident Address: Address where the patient usually resides at least for 6 months [Note: The address NRIC may not be the same]
  - Date of birth: Insert date of birth of patient into boxes. [If not available insert year of birth]
  - Sex, Ethnic Group, Citizenship : Tick appropriate box
2. Source of Information (refers to Hospital/ Clinic the notifying doctor is working in)
3. Diagnosis (If insufficient space, write the information on a piece of paper and attach as appendix)

Diagnosis (Site for topography): This refers to the diagnosis at the time of notification  
Please write in words with as much detail as possible.

Pathological Diagnosis (Morphology): Please write in words with as much detail as possible
4. Date of Diagnosis: Insert date of diagnosis made (Date that can be verified from records) and follow IARC definition\*
5. Basis of diagnosis: Tick appropriate box(es)
6. Stage of Disease at the time of diagnosis: Fill in and tick appropriate box(es)
7. Type of treatment: Tick appropriate box(es) and fill in date of first treatment
8. Present status: Tick the appropriate box and fill in relevant details.
9. Date of notification: Insert the date into the appropriate box

*\*Definition of Incidence Date*

1. *Date of first histological or cytological confirmation*
  - a) *Date when the specimen was taken (biopsy or operation)*
  - b) *Date of receipt by the pathologist*
  - c) *Date of the pathology report.*
2. *Date of admission to the hospital because of this malignancy.*
3. *Date of first consultation at the outpatient clinic (only).*
4. *Date of diagnosis, other than 1, 2 or 3.*
5. *Date of death, if no information than that the patient has died because of a malignancy.*
6. *Date of death, if the malignancy is discovered at autopsy.*

National Cancer Institute, Ministry of Health  
No. 4, Jalan P7, Presint 7, 62250 Putrajaya
